Find a solution for these senarios

Could you clarify which specific aspect of the scenarios you would like to explore? Are you interested in discussing roles to hire, project timelines, stakeholder management, or something else entirely?

SITUATION A - WHOSE DESIGN WINS?

Amsterdam has designed a user interface that requires real-time personalisation data streamed from the backend. Bangalore says this is technically impossible with the current architecture - a full redesign would take 3 months. You have 9 months until the MVP deadline. You cannot do a 3-month redesign AND build all features in time.

You have three options: (1) Amsterdam adapts the design to fit the current architecture. Risk: the user experience becomes significantly worse. (2) Bangalore does the redesign. Sprint 1-6 produce almost nothing visible, putting the 9-month deadline at serious risk. (3) Ship the MVP with the weaker UX (option 1), then redesign after the pilot customer has seen it.

a. Which do you choose? b. Who has the authority to make this call - and what happens if c. Amsterdam and Bangalore cannot agree?

That's a complex situation! For your choice of options, which do you feel aligns best with the need to deliver on time while balancing user experience? What factors led you to that conclusion?

both

It's interesting that you're considering both options together. Could you elaborate on how you envision balancing the need to adapt Amsterdam's design while also planning a redesign later? What challenges might arise from pursuing both options simultaneously?
